Dear colleague,

we invite you to join us in Groningen next year. The symposium and workshop are designed for hand surgeons, plastic surgeons, neurosurgeons and any surgeon interested in the surgical treatment of peripheral nerves and particularly in the endoscopic and minimally invasive management of nerve entrapment of the upper extremity. The emphasis of the symposium and workshop is on the endoscopic management of Cubital tunnel syndrome. But other nerve entrapments (Carpal tunnel syndrome, Pronator syndrome, Radial tunnel syndrome and Wartenberg syndrome) and their endoscopic treatment are also included.

We offer the opportunity to learn the surgical technique not only by observing live operations during the symposium but by performing them on cadaver specimens (lifelike Thiel fixation) under the tutorship of top experts in this field. The number of participants for the workshop is limited to a maximum of 24.

Apart from presentations on clinical, anatomical and surgical technical details related to entrapment syndromes there will be lectures on neurophysiology, neuro ultrasound and neuroradiological MRI techniques.

For further information on the program and preliminary registration you can contact: nervesurgery@plchir.umcg.nl or info@hpc-oldenburg.de

Sincerely,
Reimer Hoffmann and Mike Ruettermann

Reimer Hoffmann, Course Chairman
HPC Oldenburg-Institute Hand and Peripheral Nerve Surgery
